

## Lesson 06 Assignment — Bootstrap 5

***Bonus:***  
*Use the Bootstrap grid system for the page layout*

A form with text and checkbox inputs

A custom form handler that does validation and displays an alert if the input is invalid

An accordion or modal

Expectation is that form, form inputs, form submit button, alert, navigation, and accordion/modal are Bootstrap components.

The form handler will be custom functionality written by you. Revisit earlier lessons on working with the DOM if you need a refresher.
